### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: The primary reason for allowance of claims 27-28 is the inclusion of the limitations of a printer usable with thermal transfer material that includes a thermal head, disposed in a feeding path and downstream from an exposure head, for heating and pressurizing the thermal transfer material by contacting the support of the thermal transfer material while a coloring transfer layer is placed on image receiving material after a latent image is formed, so as to visibilize the latent image and transfer the coloring transfer layer to the image receiving material. It is these limitations found in the claims, as it is claimed in the combination of, which has not been found, taught or suggested by the prior art of record that makes these claims allowable over the prior art.

The primary reason for the allowance of claim 29 is the inclusion of the limitations of a printer usable with thermal transfer material that includes an ink jet recording head, disposed in a feeding path, for recording an image to a ink receiving transfer layer with ink; and a thermal head, disposed in the feeding path and downstream from the ink jet recording head, for heating and pressurizing the thermal transfer material by contacting the support of the thermal transfer material, while the ink receiving transfer layer is placed on image receiving material after the image is recorded, so as to transfer the ink receiving transfer layer to the image receiving material. It is these limitations found in the claims, as it is claimed in the combination of, which has not been found, taught or suggested by the prior art of record that makes these claims allowable over the prior art.

The primary reason for the allowance of claim 31 is the inclusion of the limitations of a printer usable with thermal transfer material that includes a thermal head, disposed in said feeding path, for heating and pressurizing said thermal transfer material by contacting said support while said coloring transfer layer is placed on an image receiving material, so as to record an image thermally in said first, second and third thermosensitive coloring transfer layers and transfer the coloring transfer layer to the image receiving material; an image receiving material transfer device for feeding said image receiving material to said thermal head such that said coloring transfer layer is transferred to the image receiving material; a first fixer lamp to emit electromagnetic rays in a first wavelength range to fix the first thermosensitive coloring transfer layer and a second fixer lamp to emit electromagnetic rays in a second wavelength range, different from the first wavelength range, to fix the second thermosensitive coloring transfer layer.

The primary reason for the allowance of claims 32-33 is the inclusion of the limitations of a printer usable with thermal transfer material that includes a thermal head, disposed in said feeding path, for heating and pressurizing said thermal transfer material by contacting said support for recording an image in the first and second thermosensitive coloring transfer layers, for recording in image in the third thermosensitive coloring transfer layer, and for transferring the first, second and third thermosensitive coloring transfer layers to an image receiving material; an image receiving material transfer device for feeding said image receiving material to said thermal head such that said coloring transfer layers are transferred to the image

receiving material; a first fixer lamp to emit electromagnetic rays in a first wavelength range to fix the first thermosensitive coloring transfer layer and a second fixer lamp to emit electromagnetic rays in a second wavelength range, different from the first wavelength range, to fix the second thermosensitive coloring transfer layer. It is these limitations found in the claims, as it is claimed in the combination of, which has not been found, taught or suggested by the prior art of record that makes these claims allowable over the prior art.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Xu et al. (US 6,348,939 B1) disclose an digital printable reactive dye and process. Wade et al. (US 5669755) disclose a color image forming apparatus utilizing a release layer. Kita et al. (US 6097415) disclose a thermal transfer recording method and apparatus utilizing intermediate transfer recording medium.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
